PROFILE

Enthusiastic student pursuing a Master of Computer Applications (MCA) with a strong foundation in computer science concepts and programming languages. Eager to leverage theoretical knowledge gained through coursework into practical application. Possess a keen interest in software development, web technologies, and problem- solving. Seeking opportunities to contribute to innovative projects and further enhance skills.

SKILLS

- C/C++
- SQL
- PYTHON
- ANDROID STUDIO
- PYTHON
- JAVA

EDUCATION

03-2018: - HIGH SCHOOL
S.G.R.R PUBLIC SCHOOL DEHRADUN.

21-07-2023: - Bachelor of Science [Information Technology].

GRAPHIC ERA UNIVERSITY
DEHRADUN.

PROJECTS:

BRAIN TUMOR DETECTION: -

- Using This Project, we could detect Brain Tumor we just have to Upload the Image to The Program GUI and after processing we get the diagnosis.
- Firstly, anisotropic filtering is applied to the image to reduce Noise and make the edges sharper.
- After Anisotropic Filtering the Image is converted to grey scale (8-Bit).
- After converting the image to greyscale, we Check the solidity of every part of Image As tumors have relatively 'High Solidity' Than its Surrounding.
- After That Morphological Operations are applied to the processed image and we get Border of Tumor (if present).
- Project is Done In MATLAB.
